NOISE MEASUREMENT TIPS

Join the 50 year old noise measurement experts **Pulsar Instruments** on their face-to-face training courses and gain vital insight into how to manage the noise measurement process in the workplace.

The one-day courses are intended to meet the needs of those new to noise at work measurement or in need of a refresher. This course is particularly suited to those who are thinking of purchasing new noise monitoring equipment and would benefit from practical, expert noise at work advice.

The aim of the course is to raise

awareness of noise as a risk, increase safety practitioners' knowledge of how to monitor noise and the

current legislation together with encouraging safer behaviours and correct use of hearing PPE.

Current course dates are:

Wednesday 13 March 2019 –

National Railway Museum, York;

Tuesday 11 June 2019 – Birmingham Science

Museum; Wednesday 18 Sept. 2019 – National Railway Museum, York.

OCCUPATIONAL SKIN MANAGEMENT

EnviroDerm Services says that it spends a considerable amount of time keeping up to date with what is happening in the fields of dermatology and skin management so as to ensure that its courses reflect the latest knowledge and techniques.

As a result EnviroDerm Services has introduced two new in-depth courses:

Skin Exposure Risk Assessment will cover an in-depth understanding of how our skin interacts with the working environment and the consequences. It then provides a structured, practical approach to identifying the real hazards, exposures and the potential for these to result in damage to health.

Control of Skin Exposure provides a comprehensive examination of how skin exposure can be prevented or correctly managed.

Dr Helen Taylor's very popular course – Occupational Skin Health Surveillance and Management – has also been fully updated.

UNDERSTANDING HSE PROHIBITION NOTICES

No matter what kind of industry you work in, every business needs a detailed health and safety policy. Effective safety procedures will raise awareness of workplace hazards and reduce the risk of accident or illness; ultimately reducing absence rates, improving productivity and saving substantial amounts of money.

An HSE prohibition notice is issued to an employer if they haven't enforced safe working practises, and these unsafe practises are believed to pose a serious risk of injury or death. When you're served the notice, you're legally obliged to immediately cease the dangerous activity until safer procedures have been put in place. A failure to comply with a prohibition notice will result in prosecution.

Praxis42 says that its health and safety online courses ensure all employees and managers can effectively identify common workplace hazards.

The company added, "Teaching staff the importance of risk assessments and creating a safer working environment, these courses will help you stay in line with legislation and avoid any HSE penalties."

FREE PAT WEBINARS

An electrical testing expert is offering electricians and those working in the industry the chance to gain in-depth knowledge about the latest advances in PAT testing thanks to a series of free webinars.

Seaward hopes the webinars will give people the chance to widen their knowledge of PAT testing and keep up with industry standards – as well as providing hints and tips for those new to the electrical safety tests.

Portable appliance tests (PAT) are quick and simple checks performed on electrical appliances. Employers are legally required to ensure any electrical equipment is maintained in a safe condition – and PAT tests are the simplest way to do this.

NEW COURSES FOR 2019

For 2019 RRC are introducing two new NEBOSH Courses to its Dubai classroom schedule along with expanding the courses offered in its UK centres.

Launched in London in mid 2018, RRC's NEBOSH HSE Certificate in H&S Leadership Excellence course has proven exceptionally popular and for 2019 RRC has scheduled further courses in Birmingham, Glasgow, Manchester and Newcastle. The company is also introducing the course to its Dubai centre with the first course in February, and a further four dates scheduled throughout the year.

Following the growing interest in environmental training in the Middle East region, RRC is also introducing the NEBOSH International Environmental Diploma to its Dubai centre with the first course starting in the Autumn of 2019. This is a three week course and has been structured to incorporate the NEBOSH Environmental Certificate to allow students to gain two qualifications. These courses are also available online and can be studied anywhere in the world.
