

TARGETED DRIVER TRAINING

Many lorry drivers in the food and drink retail and logistics sectors are missing out on appropriate, relevant Driver CPC Periodic training, according to RTITB.

“As an employer, delivering generic Driver CPC modules from

a training provider might tick a compliance box, but it falls short in terms of addressing the particular needs of the food and drink industry,” says Laura Nelson, MD of RTITB, which has launched a Food and Drink

logistics module for Driver CPC Periodic Training to help meet these challenges.

The new module, available to members of the RTITB Master Driver CPC Consortium, includes topics specific to food and drink

sector drivers, including: Food Safety Regulations; Food Handling and Hygiene; Refrigeration – Chilled and Frozen; Multi-drop; Drinks Logistics; Drayman Operations; and Milk Tankers.

MACHINERY SAFETY: SYSTEMATIC APPROACH

Pilz has developed a new international qualification programme for professional advancement in the field of machinery safety and automation.

Operating across Pilz subsidiaries worldwide, the qualification concept guides training delegates from basic knowledge through to TÜV-certified expert level.

The content and structure of the training courses are designed so that

delegates can plan their personal qualification path, entering at their own level. The programme comprises four levels: Introduction, requiring no prior knowledge of machinery safety; Fundamental; Advanced; and Expert, which is intended as the step to becoming an absolute specialist in a subject area. At Expert level, the courses are also validated and certified by the external testing

organisation TÜV Nord.

The programme is offered in each individual country in the local language and to the same standard.

ENVIRONMENTAL MANAGEMENT COURSE

To meet demand for environmental management training in the Middle East, RRC now offers the NEBOSH International Diploma in Environmental Management course as a classroom option within its Dubai schedule.

RRC's online version of the course has been available since its introduction by NEBOSH in 2017.

The NEBOSH Diploma in International Environmental Management is a qualification for environmental practitioners and safety professionals. The course provides specialist knowledge on environmental management systems and topics such as sustainability, energy and waste management.

The three-week course starts in September, with four weeks gaps between teaching sessions, enabling students to reinforce their learning in their workplaces. Those wanting to achieve the NEBOSH Environmental Certificate along with the diploma can do so; those who already have the NEBOSH Environmental Certificate can be exempted from the first week.

TRAINER TEAM EXPANDS

Team Valley based Access Training has appointed a senior trainer and industry expert to meet increasing demand for fire, security and emergency systems apprenticeships in the region.

Access currently has 50 apprentices on the Fire, Security and Emergency Systems Apprenticeship, working toward their professional qualification whilst gaining paid work experience as young engineers and technicians at firms from across the North East

Malcolm Armstrong, MD of Access Training, says: “Adding Dave Cash to our team of trainers means we can respond to increased

demand, and I'm sure the experience he brings will be a great benefit to our apprentices.”

Engineer Cash has 30 years' experience working within the

security and alarms sector with employers including ADT Fire and Security, most recently as a field line manager.
